	Urgent	**Not Urgent**
Important	Do - Set up React, Flask, and PostgreSQL - Research places to access Draftout data - Implement username input	Schedule - Design PostgreSQL database structure - Determine how to categorize player playstyles - Determine how to compare global average to specific player performance
Not Important	Delegate - Find examples of good frontends for a statistics page - Find libraries for UI - Find examples of player statistics	Delete - Unnecessary decoration - Unrelated features to player statistics - Too much customization options
